

Undisputed Accuracy for Your Quantitative Results

New ready-to-use
Certified Reference Materials for
water and wastewater analysis

Diluted Certified Reference Materials ready-to-use

Experience absolute precision with our ready-to-use diluted certified reference materials (CRMs). Thanks to their exact concentrations, expanded measurement uncertainty, and direct traceability to NIST primary reference materials, our CRMs ensure that your results are correct and comparable worldwide.

**PRECISE
ANALYTICAL
QUALITY
CONTROL**

**DIRECTLY
TRACEABLE
TO NIST**

**NO
DILUTION
NEEDED**

Exact, batch-specific concentration and expanded measurement uncertainty

Complete range with all parameters for analytical quality control of wastewater, drinking water and process water

Detailed Certificate of Analysis for each CRM simplifies accreditation:
MerckMillipore.com/crm-standards

Compatible with Spectroquant® test kits or those from other suppliers

Ready-to-use, diluted CRMs save time and prevent dilution errors

Long shelf life of 24 months

Directly traceable to NIST or USP primary measurement standards

Ideal for validating international norm methods: ISO, EN, APHA and EPA

Even better together

The perfect combination for water analysis: use our certified standard solutions with Spectroquant® Prove spectrophotometers.

Certified Reference Materials, ready-to-use, for Photometry and other Applications

Standard Solutions, traceable to SRM from NIST

Guideline for Calculating your Working Tolerance

According to ISO 17025, every lab needs to calculate its working tolerance. Here are some hints for this procedure.

To help determine the individual measurement-uncertainty estimation, every laboratory that works according to the ISO 17025 standard should prepare a control chart for each reference material and for every lab operator. When it comes to defining the lab's working tolerance, the recommended procedure is to:

- Calculate the standard deviation of the measurements of the standard
- Define the lab's own error tolerances that are to be strived for

Here the user should consider the confidence interval that is usually used. Two-fold standard deviation yields a 95% confidence interval, and three-fold standard deviation a 99% confidence interval. The defined confidence interval should be marked on the control chart as the upper and lower limit.

The standard should be measured regularly, if not on a day-to-day basis. The instructions can be taken from the corresponding standards or the internal specifications. Wherever applicable, in the case that the method covers a larger measuring range, two or more standards in the range of the normal results should also be determined.

In the Spectroquant® test kits, we state the accuracy of the respective method on the Certificate of Quality and in the package leaflet. This can be used to facilitate the estimation of the working tolerance. The working tolerance naturally also depends on the optical path length of the cells that are used.

The accuracy is calculated on the basis of the mean value of the 95% confidence interval of the respective test; this has been calculated over many years of experience along with the specified blank error. The blank error is stated in the batch certificate of each batch of the respective test kit for the reference cell.

These reference materials can be used to check all photometric methods (both standards and test kits). The reference materials can however, also be used for non-photometric methods. In this case, the user must perform their own measurement-uncertainty estimation. Guidelines or working tolerances of the type that we offer for our test kits are not available for other methods. The same applies for test kits supplied by other manufacturers.

Important definitions for Certified Reference Materials

Traceability

“Property of a measurement result whereby the result can be related to a reference through a documented unbroken chain of calibrations, each contributing to the measurement uncertainty.” ISO Guide 99:2007; International Vocabulary of Metrology — Basic and General Concepts and Associated Terms (VIM)

Certified Reference Material (CRM)

“Reference Material (RM) characterized by a metrologically valid procedure for one or more specified properties, accompanied by an RM certificate that provides the value of the specified property, its associated uncertainty, and a statement of metrological traceability.” ISO/Guide 30:2015; Reference Materials — Selected Terms and Definitions

Primary measurement standard

“Measurement standard that is designated or widely acknowledged as having the highest metrological qualities and whose property value is accepted without reference to other standards of the same property or quantity, within a specified context.” ISO/Guide 30:2015; Reference Materials — Selected Terms and Definitions

Secondary measurement standard

“Measurement standard whose property value is assigned by comparison with a primary measurement standard of the same property or quantity.” ISO/Guide 30:2015; Reference Materials — Selected Terms and Definitions

Measurement uncertainty

Non-negative parameter characterizing the dispersion of the quantity values being attributed to a measurand, based on the information used.

ISO Guide 99:2007; International Vocabulary of Metrology - Basic and General Concepts and Associated Terms (VIM)

Expanded measurement uncertainty

Product of a combined standard measurement uncertainty and a factor larger than the number one NOTE: The term “factor” in this definition refers to a coverage factor.

ISO Guide 99:2007; International Vocabulary of Metrology - Basic and General Concepts and Associated Terms (VIM)

Photometric, ready-to-use, multi-parameter standards and spiking solutions - Spectroquant® CombiCheck

CombiCheck contains multi-parameter standard solutions for checking the overall system – from test kits and instruments to individual working procedures. Each pack contains one standard solution and one addition solution, both of which are directly traceable to NIST primary standards.

When the specified concentration of the standard solution is achieved, the entire analysis system is in order. If there are deviations from the stated value, use the addition solution to identify errors due to interfering substances in the sample matrix. In case the recovery

rate is insufficient (beyond specified tolerances), analyze and eliminate the cause through appropriate countermeasures, such as sample pre-treatment.

Certipur® and TraceCERT® Certified Reference Material Standard Solutions

If you need to make your own dilute solutions according to your lab-specific concentrations, rely on the superb quality of our Certipur® and TraceCERT® Certified Reference Material Standard Solutions.

Certipur®		TraceCERT®
Anionic solution	Cationic solution	Anionic and cationic solutions
Concentrations: 1000 mg/L		
Unique level of accuracy and lot-specific value		
		Produced according to ISO Guide 34
		Analysed in our ISO/IEC 17025 accredited lab
Directly traceable to the corresponding NIST CRMs		Traceable to at least two independent references (NIST, BAM or SI unit kg)
Sophisticated packaging* and comprehensive documentation including proper uncertainty calculation, expiry date and storage information		

* All standards are supplied in HDPE bottles except for the TraceCERT® Mercury solution, which is bottled in 100 mL borosilicate white glass bottle

A batch specific certificate is available via internet

Analytical Instrument Qualification of Photometric Equipment

UV/Vis Certified Reference Material (CRM) and Certipur® Reference Material Solutions (RM)

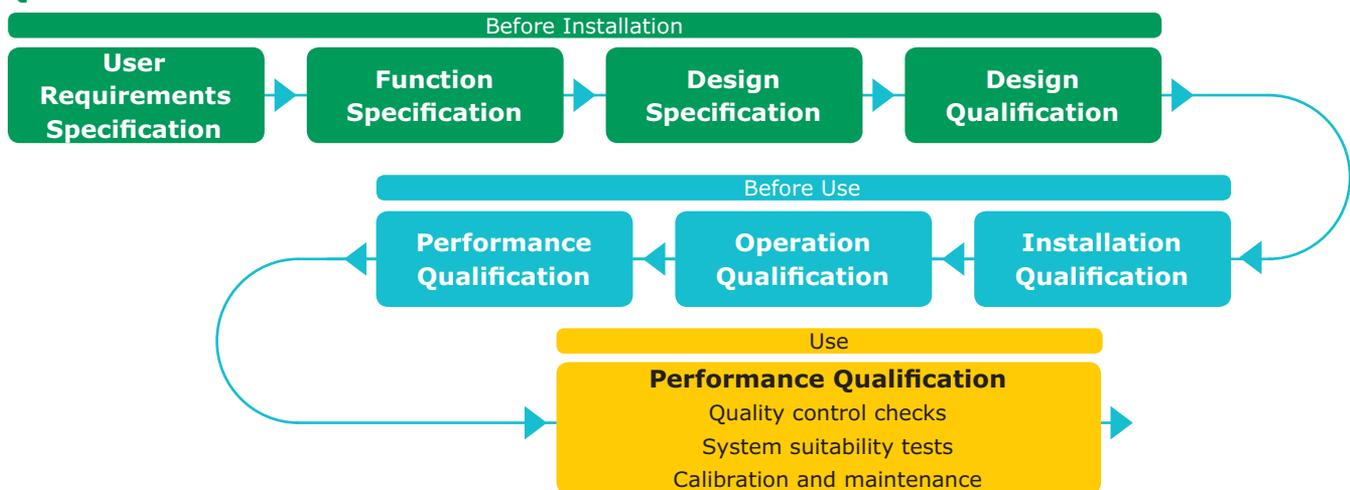

Using our UV/Vis solutions, the consistent and correct function of your UV/Vis spectrophotometer can be detected throughout the whole timeline of analytical Instrument Qualification (AIQ).

Our product program consists of double-certified solutions acc. to ISO 17025 and ISO/IEC 34 as well as Certipur® reference solution. The solutions are either manufactured acc. to Ph.Eur. or USP<857>.

See the following table for an overview about our UV/Vis solutions application possibilities and features

	Certified Reference Material Solutions	Certipur® Reference Solutions
Application	During the qualification process <ul style="list-style-type: none"> • At instrument installation (new, old or existing unqualified instrument) • After installation or major repair of an instrument • Periodically at specified intervals for each instrument 	During operation <ul style="list-style-type: none"> • For quality control checks • For system suitability tests • For calibration and maintenance
Features	Double-certified solutions according to ISO17025 and ISO Guide 34	
	Manufactured acc. to Ph.Eur.	
	Manufactured acc. to USP<857>	
	Ready-to-use solutions	
	Packaged in amber glass ampoules for increased stability	
Parameters detected	<ul style="list-style-type: none"> • Absorbance • Stray light • Spectral resolution • Wavelength accuracy 	

Qualification Processes

Certified Reference Material Solutions

Product	Description	Order No
UV Photometric Accuracy Standards acc. to Ph.Eur.	Standard: 2x10 mL $K_2Cr_2O_7$ – 60.06 mg/L in H_2SO_4 / 0.01N Blank: 1x10 mL H_2SO_4 / 0.01N	Z804452
UV Resolution Standard acc. to Ph.Eur.	Standard: 1x10 mL 0.02%(v/v) toluene in n-Hexane Blank: 1x10 mL n-Hexane	Z894568
UV Stray Light Standards acc. to Ph.Eur.	Standard: 1x10 mL KCl 12 g/L in H_2O Blank: 1x10 mL H_2O	Z804665
UV Spec Qualification Kit	Contains Z804452, Z804568, Z804665	Z804789
UV5, UV25 for testing wavelength accuracy, UV5 for 240-650nm; UV25 for 730-870nm acc. to USP <857>	Holmium in perchloric acid (667-UV5: Calibration standard, consisting of a standard cell containing 40g/L Ho_2O_3 in 10% $HClO_4$. The cell is permanently sealed.) Didymium in perchloric acid (667-UV25: Calibration standard, consisting of a standard cell containing Didymium (Neodymium & Praesodymium) in 10% $HClO_4$. The cell is permanently sealed.)	Z804800
UV1, UV1H for testing stray light from 190-205nm acc. to USP <857>	Potassium chloride in purified water (667-UV1: wavelength [nm] 200 (cut-off), pathlength 10 mm) Potassium chloride in purified water, reference filter (667-UV1H: wavelength [nm] 200 (cut-off), pathlength 5 mm)	Z805459
UV10, UV10H for testing stray light from 210-259nm acc. to USP <857>	Sodium iodide in purified water (667-UV10: wavelength [nm] 259 (cut-off), pathlength 10 mm) Sodium iodide in purified water reference filter (667-UV10H: wavelength [nm] 259 (cut-off), pathlength 5 mm)	Z805564
UV11, UV11H for testing stray light from 300-385nm acc. to USP <857>	Sodium nitrite in purified water (667-UV11: wavelength [nm] 385 (cut-off), pathlength 10 mm) Sodium nitrite in purified water reference filter (667-UV11H: wavelength [nm] 385 (cut-off), pathlength 5 mm)	Z805661
UV19, UV19H testing stray light from 205-320nm acc. to USP <857>	Acetone (667-UV19: wavelength [nm] 325 (cut-off), pathlength 10 mm) Acetone reference filter (667-UV19H: wavelength [nm] 25 (cut-off), pathlength 5 mm)	Z805785
UV1, UV1H, UV10, UV10H, UV11, UV11H, UV19, UV19H testing stray light acc. to USP <857>	Set of Z805459, Z805564, Z805661, Z805785	Z805890

Certipur® Reference Solutions

Product	Description	Order No
UV/Vis Standard 1 – Potassium dichromate for absorbance acc. to Ph.Eur.	2x10 mL $K_2Cr_2O_7$ 60.06 mg/L in H_2SO_4 / 0.01N and 6x10 mL H_2SO_4 / 0.01N	1.08160.0001
UV/Vis Standard 1A Potassium dichromate solution for the absorbance at 430 nm acc. to Ph.Eur.	2x10 mL $K_2Cr_2O_7$ 606.6 mg/L in H_2SO_4 / 0.01N and 6x10 mL H_2SO_4 / 0.01N	1.04660.0001
UV/Vis Standard 2 Sodium nitrite solution for straylight testing acc. to Ph.Eur.	3x10 mL $NaNO_2$ 50g/L in H_2O	1.08161.0001
UV/Vis Standard 3 Sodium iodide solution for straylight testing acc. to Ph.Eur.	3x10 mL NaI 10 g/L in H_2O	1.08163.0001
UV/Vis Standard 4 Potassium chloride solution for straylight testing acc. to Ph.Eur.	3x10 mL KCl 12 g/L in H_2O	1.08164.0001
UV/Vis Standard 5 Toluene solution in hexane for testing the resolution acc. to Ph.Eur.	2x10 mL 0.02% (v/v) toluene in n-hexane and 6x10 mL n-hexane	1.08165.0001
UV/Vis Standard 6 Holmium oxide solution reference material for wavelength accuracy	3x10 mL Ho_2O_3 40 g/L in $HClO_4$ (10% v/v)	1.08166.0001
